General

The Leybold Valve Program

The long-standing experience of Leybold in the area of vacuum engineering is reflected in the selection and the design of the valves and vacuum protection components for a wide variety of applications.

The range of products is such that a reliable solution can be offered for every vacuum engineering application. Many years of service and the reliability of the valves is ensured by design. Leybold valves are well-proven in many widely varying areas of research and industry.

The Design of a Vacuum Valve Scope of the Range of Valves

The range of Leybold valves comprises:

- Small valves **micro**
- Right-angle and straight-through valves with a nominal width of DN 16 to DN 40 with ISO-KF flanges
- Right-angle valves with a nominal width of DN 63 to DN 250 with ISO-K flanges
- Gate valves with a nominal width of DN 16 to DN 250 with various flanges
- Ball valves
- Special valves

It is the aim of Leybold to meet, through the offered range of isolation components and valves, the customers requirements regarding the design of such components. For this reason all valves are available with different driving systems.

With the exception of the special valves you may select between an electro-pneumatic drive or an electro-magnetic drive system.

Right-angle valves DN 16 ISO-KF to DN 40 ISO-KF as well as DN 63 ISO-K to DN 160 ISO-K are either available with an Aluminum or stainless steel body (the latter up to DN 100 ISO-K only).

The special characteristics of the application in each case result in special requirements concerning features of the valves, for example:

- Coating
 - Short switching cycles (e.g. 1.5 s)
 - Very high number of opening and switching cycles (e.g. over 10 million cycles)
- Analytical engineering
 - High conductance (similar to the corresponding flange components, like bends, for example)
 - High integral leak tightness for the valves (leak rates below 10^{-9} mbar l/s)
- Lamps and tubes manufacture
 - Temperature resistant
 - Permissible ambient temperatures, 50 °C max.
- Accelerator technology
 - Materials capable of resisting radiation, high temperatures and corrosion at the same time
- Metallurgy and furnace manufacture
 - Rugged and insensitive to contamination
- Chemistry
 - Choice of materials in contact with the medium for the valve body

All applications have the following requirements in common:

- Quiet opening action with very little vibration
- Compact design, low weight
- Highly visible, unambiguous position indicator
- For use within the pressure range from 10^{-8} to 2500 mbar, if not stated otherwise
- Fully operational within the entire specified pressure range

Leybold valves meet these requirements, unless otherwise stated by the technical data.

Quality Assurance

The various markets, like Analytical or Coating, for example are very demanding regarding certain important features for the valves which are to be used in the new generation of instruments currently under development. Demanded are, among other things, high reliability during the entire service life, high integral leak tightness, a high number of opening/closing cycles as well as a fast response.

The valves from Leybold meet all these demanding requirements!

For further information on flange connections and flange components please refer to Catalog Parts "Flanges and Fittings" and "Feedthroughs".

Flange Designations

The flange designations used in this Catalog Part are in line with the international standards and the nomenclature used in practice:

Flange Type	Standard	Designation with standardized nominal width ¹⁾ (DN)
Small flanges	ISO 2861/1	"ISO-KF"
	DIN 28 403	e.g. DN 40 ISO-KF
Clamp flanges	ISO 1609	"ISO-K"
	DIN 28 404	e.g. DN 100 ISO-K
Fixed flanges/ collar flanges with retaining ring	ISO 1609	"ISO-F"
	DIN 28 404	"F" for fixed flange e.g. DN 250 ISO-F

In the case of gate valves equipped with CF flanges the following must be noted:

The designation DN 35 CF for UHV flanges has been changed to DN 40 CF with the sealing parameters remaining unchanged; the same applies to DN 150 CF which has changed to DN 160 CF.

Advantages to the User

- Compact design
- Integral leak rate less than 10^{-8} mbar l/s
- FPM (FKM) sealed
- For pressures up to 2000 mbar
- Seal in both directions ²⁾
- Principal dimensions comparable to Leybold flange components of the same nominal width
- Reliable operation ensured regardless of the valve's orientation
- Optical valve position indicator as standard (not for valves of the "micro" range)
- Electrical valve position indicator as standard (not for valves of the "micro" range)
- Operation of electromagnetic ISO-KF valves off supply voltages ranging from 100 to 230 V AC
- The inside of the housing in contact with the medium is sealed off against the atmosphere by a bellows type seal which is free of lubricants.

All further technical data as well possible deviations from the general specifications stated here can be found along with the descriptions for the individual valve types.

For various applications and special design requirements Leybold offers a range of special valves:

- SECUVAC vacuum safety valves (DN 16 ISO-KF to DN 100 ISO-K)
- Venting valves / power failure venting valves
- Vacuum locks / sealing valves
- Variable leak valves
- Ball valves (straight-through valve)

Accessories

All connecting components like centering rings, clamps or clamping rings needed to connect the valves must be ordered separately (see Catalog Parts "Flanges and Fittings" and "Feedthroughs").

Materials

The valve bodies and the inside parts are made of selected, vacuum compatible materials, like wrought aluminum or cast stainless steel.

The raw components are subjected to a 100% test before they are further processed.

The materials which are used are described in the tables at the end of the chapter "General".

Gaskets

Shown in the table at the end of the chapter "General" are the types of gasket used in the valves together with their brief or chemical designations and their thermal ratings.

Other Materials

Plastic:	Polyamide 6 (PA 6)
Grey cast iron:	GG 20 (0.6020)
Brass:	Ms 58
Brass (nickel-plated):	CuZn39Pb3
Nimonic	
Bronze	
Spring steel	

¹⁾ The standardized nominal width (DN) corresponds approximately to the inside diameter, but need not necessarily be identical to the inside diameter.

²⁾ High vacuum systems are very demanding as to the leak tightness of the vacuum components used. For this reason each individual Leybold valve is subjected to a helium leak test before delivery. The valves are only considered as leak tight, if a leak rate of less than 10^{-9} mbar x l/s can be measured for the body and the valve seat.

In the case of our high vacuum valves with ISO-KF and ISO-K flanges a leak rate of less than 10^{-9} mbar x l/s is maintained also during actuation.

This means that in the case of a gas flow of the mentioned order of magnitude the pressure would increase only by 3 mbar in a vessel of 1 liter and in 100 years.

EME	Solenoid right-angle valve
EPD	Electropneumatic straight-through valve
EPE	Electropneumatic right-angle valve
MAN	Manual operation
PD	Pneumatic straight-through valve
PE	Pneumatic right-angle valve

Products

Small Valves of the “micro” Range

Overview

Leybold small valves **micro** are available with any of three drive systems, two types of body and three adaptors.

Types of drive

- Pneumatic (1)
- Electropneumatic (2)
- Electromagnetic (3)

Types of valve body

- Right-angle valve (4)
- Straight-through valve (5)

as well as adaptor

- DN 10 ISO-KF flange (6)
- 1/4" tube (7)
- 6 mm tube (8)

Dimensional drawing for the **micro MAN**

Connection dimensions for small valves **micro**

Technical Information

micro valves are supplied without adaptor.

The adaptors must be ordered additionally.

Right-Angle and Straight-Through Valves, Bellows-Sealed, Various Drives

Dimensional drawing for the pneumatically actuated small valves **micro**

Dimensional drawing for the electropneumatically actuated small valves **micro**

Dimensional drawing for the electromagnetic actuated small valves **micro**

Advantages to the User

- Small size
- High conductance in the molecular flow range
- Long service life of over 2 million switching cycles
- High switching frequency
- Protection class IP 50

Typical Applications

- Gas handling systems in production machines
- Latest generation analytical equipment

Valves with ISO-KF Flanges

Overview

Leybold ISO-KF valves are available with any of four drive systems and four types of body having a nominal width of DN 16, 25, 40 and 50 ISO-KF.

Abbreviations used in connection with bellows sealed valves:

B Bellows sealed

A Angle (valve)

I Inline (valve)

V Valve

M Rotary knob

P Pneumatically actuated
(without pilot valve)

EP Electropneumatically actuated
(with pilot valve)

EM Electromagnetically actuated

AL Aluminum body

SS Stainless steel body

BAV ... EP AL ...

Types of drive

- Rotary knob **1**
with bellows seal
- Pneumatic **2**
with bellows seal
- Electropneumatic **3**
with bellows seal
- Electromagnetic **4**

Types of valve body

- Right-angle valve,
aluminum body **5**
- Right-angle valve,
stainless steel body **6**
- Straight-through valve,
aluminum body **7**
- Straight-through valve,
stainless steel body **8**

- ☉ Mechanical position indicator
- ⊕ Leak detection bore
- ⊙ Electrical connection
- ⊙ Compressed air connection

Advantages to the User

- Quiet opening and closing action with very little vibration
- Short opening and closing times
- Optical valve position indicator as standard
- Very low leak rate and insensitive to particles owing to bellows seal. Always closed in case the compressed air supply fails
- Electric position indicator is standard
- With and without pilot valve as standard
- Standard electrical and compressed air connections
- Protection class IP 50
- The valves are closed by the restoring force of a spring
- Installation in any orientation and no restrictions as to the direction of flow

Q	mm	46	44	73.5	85.5
E	mm	29.6	30	36.1	37.6
Z	mm	2	4	9.5	10
M	mm	120	125	160	185

Connection Icons

- ▼ Side of the valve seat
- * Required clearance
- ☉ Mechanical position indicator
- ⊕ Leak detection bore
- ⊙ Electrical connection
- ⊙ Compressed air connection

Advantages to the User

- Quiet opening and closing action with very little vibration
- Short opening and closing times
- Optical valve position indicator as standard
- Very low leak rate and insensitive to particles owing to bellows seal – thus always closed in case the compressed air supply fails
- Electric position indicator is standard
- With and without pilot valve as standard
- Protection class IP 50
- Standard electrical and compressed air connections
- The valves are closed by the restoring force of a spring

Electromagnetic valves are particularly well suited for vacuum systems in which the valves need to be remotely controlled and where compressed air is not readily available.

Advantages to the User

- Selectable operating mode:
 - Remote control via programmable control or personal computer
 - direct operation by switching the supply voltage on and off
- Well visible, unambiguous optical position indicator: open (green LED) and closed (orange LED)
- Integrated electrically floating position indicator (opto-coupler for 48 V DC)
- Optical error indicator (LEDs flash)
- Protection class IP 40
- Spring action closure, thus closed when the power fails
- Low operating temperature
- Installation in any orientation and no restrictions as to the direction of flow

Right-Angle Valves with ISO-K Flanges

Overview

Leybold valves with ISO-K flanges are available with any of two drives and either of two bodies.

Types of drive

- Handwheel **(1)**
- Electropneumatic drive **(2)**

Body types

- Right-angle valve with aluminum body **(3)**
- Right-angle valve with stainless steel body **(4)**

Advantages to the User

- Full exchangeability of the subassemblies
- Two types of drive
- Two body options
- Standard nominal widths to DIN 28 404 and ISO 1609
- Simplified stocking of spare parts

Connection Pictograms

- Position indicator connection
- ⓘ Compressed air connection
- ⚡ Power connection
- Position indicator

Nominal widths DN 63 ISO-K and DN 100 ISO-K are available in aluminum and stainless steel, DN 160 ISO-K in aluminum only.

Nominal width DN 100 ISO-K only with pneumatic or electropneumatic drive.

Right-Angle Valves, Bellows-Sealed, Manually Operated

Dimensional drawing for the right-angle valves, bellows-sealed, manually operated, dimensions in mm

The universal valves are particularly well suited for systems where remote control is not mandatory. Moreover, the valves may be used for maintenance purposes in connection with backing pumps or condensate separators.

Advantages to the User

- Removable handle
- Modular design
- Rugged and compact
- Easy to clean
- Gentle venting of systems
- Seal in both directions up to a pressure difference of 1.5 bar
- Easy manual operation, for an effortless vacuum-tight seal
- May also be used as a variable leak valve to roughly control gas flows
- Installation in any orientation and no restrictions as to the direction of flow

Right-Angle Valves, Bellows-Sealed, Manually Operated

These universal valves are ideal especially for smaller systems, where remote control is not essential.

They may be also installed in larger systems, where backing pumps or condensate separators or similar units are to be cut off at longer intervals for maintenance purposes by maintenance personnel.

Advantages to the User

- Gentle venting of systems
- Seal in both directions up to a pressure difference of 1.5 bar
- Easy manual operation, for an effortless vacuum-tight seal
- May also be used as a variable leak valve to roughly control gas flows
- Installation in any orientation and no restrictions as to the direction of flow

Right-Angle Valves, Bellows-Sealed, Electropneumatically Operated

Electropneumatically actuated right-angle valves, bellows sealed, stainless steel, DN 100 ISO-K (left), aluminum DN 160 ISO-K (right)

Electropneumatically actuated right-angle valves are used in automated vacuum systems which need to be controlled electrically.

Advantages to the User

- Pneumatic or electropneumatic opening
- Short opening and closing times
- Optical position indicator
- Electric position indicator
- With and without pilot valve IP 54
- Protection class IP 50
- The valves are closed by the restoring force of a spring
- Installation in any orientation and no restrictions as to the direction of flow

Special Valves with ISO-KF/ISO-K/CF Flange

Overview

Leybold offers a range of special valves for a variety of different applications and to meet special design requirements of customers.

Among these are:

- SECUVAC vacuum safety valves (DN 16 ISO-KF to DN 100 ISO-K) **1**
- Venting Valves **2**

- Power failure venting valves **3**
- Vacuum Locks **4**
- Sealing Valves **4**
- Variable leak valves **5**
- Ball Valves **6**

These valves ideally supplement our range of ISO-KF and ISO-K valves.

SECUVAC Vacuum Safety Valves

Dimensional drawing for the SECUVAC valves with ISO-KF small flanges

Dimensional drawing for the SECUVAC valves with ISO-K clamp flanges

These solenoid right-angle valves were specially developed for use with rotary vacuum pumps which are not equipped with a built-in anti-suckback valve. The SECUVAC safety valve protects the vacuum system against unplanned venting via the backing pump in case of a power failure and it ensures that the vacuum system remains sealed until the backing pump, after it has restarted, has evacuated the connecting lines.

Dimension Table Special Valves (ISO-KF)

DN	ISO-KF	16	25	40
a	mm	40	50	65
b	mm	49	49	49
D	mm	44	56	82
h	mm	138.6	161.8	177.8
h ₁	mm	62.3	82.5	101.7
h ₂	mm	24	27	24,3

Dimension Table Special Valves (ISO-K)

DN	ISO-K	63	100
a	mm	88	108
b	mm	49	49
D	mm	124	164
h	mm	220.5	263.5
h ₁	mm	150	175
h ₂	mm	18.2	36.2

Advantages to the User

Two valve functions in one:

- Fast-closing high vacuum isolation valve for separating the vacuum chamber or a vapor jet pump (a diffusion pump, for example) from the backing pump
- Venting valve for venting of the valve's chamber and thus the pump (backing pump)
- Immediate closing action upon power failure
- Opening action only after the in-take line has been evacuated
- Delayed isolation of the vacuum chamber and venting the vacuum pump (negligible "gulp")

Typical Applications

- Safety isolation valve between backing pump and vacuum chamber or vapor jet pumps (protection of the vacuum chamber against venting in the event of a power failure)

Variable Leak Valve with Isolation Valve

Dimensional drawing for the variable leak valve with isolation valve

Variable leak valves with a isolation valve permit an interruption of the gas supply without changing the gas admission rate setting.

Applications

- Gas admission rates of 1000 to 5×10^{-6} mbar x l/s allow variable leak valves to be used in almost all applications
- Through the digital display, the opening point may be accurately set at any time or a certain gas flow may be defined
- Blocking valve

Vacuum Locks and Sealing Valves

Dimensional drawing for the sealing valves

Dimension Table

DN	ISO-KF	16	25	40
a	mm	40	50	65
d	mm	16	25	38
h	mm	124	160	190
h ₂	mm	30	30	40

A screw-in sealing element with a hex. socket into which the spindle of the gas lock is inserted for actuation has been integrated within the tubulation.

After having filled in the gas or evacuated the chamber, the gas lock is detached from the small flange and may thus be reused for an unlimited number of times on other sealing valves.

Advantages to the User

- Simple to use, handy knob
- Compact, low weight
- Also well-suited for operating older types of sealing valves from Leybold
- Long travel and high conductance, thus short pumpdown times
- Spindle can be arrested in its end position
- Double O-ring seal offering a very low leak rate ($< 1 \times 10^{-7}$ mbar x l/s) and a long service life

- May be used in the entire rough and medium vacuum range
- Long service life
- Secured against inadvertent opening
- Temperature resistant

Vacuum lock	60 °C
Blocking valve	100 °C
- May be protected by a standard blank flange against becoming dirty

Typical Applications

- Sealing of evacuated or gas-filled chambers
- Post-evacuation of vessels
- Topping up and exchanging the gas filling in vessels
- Sealing valves with stainless steel ISO-KF connection and stainless steel tubulation for welding to the chamber

D	mm	26	30	42	60

Ball valves are rugged and cost-effective straight-through valves of small size, which are opened or closed simply by operating a lever. The valve position (OPEN/CLOSED) can be determined from the lever's position. The lever may be detached.

Ball valves are provided with lubricated gaskets and when open they permit an unobstructed passage.

Advantages to the User

- Leak tight on both sides against the atmosphere; can be opened against atmospheric pressure

Accessories for the Electropneumatically Operated Valves

Pilot Valves

Pilot valve

A range of pilot valves is available for actuation of the electropneumatic ISO-KF valves, which cover all commonly used control voltages.

Advantages to the User

- Easy to fit to the pneumatic cylinder, adaptor is included with the DOT valve

Supplied Equipment

- Hose connection and gasket for connection to the compressed air supply

Ordering Information

ISO-KF Pilot Valves for DOT Valves (incl. Solenoid Coil)

	Part No.
110 – 120 V AC / 50/60 Hz (normally closed)	E 280 72
24 V DC (normally closed)	E 280 74

Interference Suppression Kit – Illuminated

As an option for the solenoid coil and the pilot valves an interference suppression kit is offered so as to reliably prevent any pick-up of interference by sensitive equipment in the vicinity of the solenoid coils.

UHV All-Metal Right-Angle Valves

Our UHV all metal angle valves are the reliable solution for all applications in ultra-high vacuum. The innovative design and rotatable CF flanges allow a convenient handling and an easy installation.

The reliability of the valve is achieved by the use of optimal sealing materials. The silver-coated sealing with its very long service life is maintenance-free at more than 1000 cycles. A mechanical stop prevents the valve from too much torque that might cause damages to the sealing. Also the mechanical stop indicates when the valve is fully closed. For operating the valve a plastic hand wheel and a metal T-handle are available. The advantage of the T-handle is that it suited for heating processes and does not need to be removed.

Advantages to the User

- Very reliable sealing
- Maintenance-free for over 1000 cycles
- Very easy to use, mechanical stop prevents from over torque
- T-handle available for bake out processes
- Coated spindle, no lubrication necessary
- Very high lifetime due to the coated metal sealing

H ₁	mm	82.5	120.65	171.45
H ₂	mm	77.4	115.5	166

Advantages to the User

- Valve and wheel can be degassed at temperatures up to 250 °C (up to 200 °C when closed)
- Stainless steel body (non-rusting)
- Bellows-sealed feedthrough
- Low play in the locked state and low wear
- Compact
- Mechanically locked in the closed state
- Mechanical position indicator
